ABSTRACT

A comparative study of aggression level among individual game, combative game and team game. Ten subjects from each group were selected randomly ageing from 17 to 25 years for collection of data. To measure the aggression level the sports aggression inventory developed by Anand Kumar and Prem Sankar Shukla is used to get the scores. This questionnaire was distributed to the individual, combative and team games players. Result of this study shows that there is no significant different was found in relation to aggression level among individual combative and team games respectively at the level of 0.05 significant level.

Keywords: Aggression, Combative
